# To do list application

## Technologies used:

- HTML5
- CSS3
- PHP 8.0
- MySQL
- Bootstrap 5

## Development environment:

It must have PHP and MySQL support. Bootstrap is gathered from source site.

All user passwords must be set in *mysqli_connect.php* file.

For my testing environment I used Xampp with MySQL database.

MySQL dump file is attached outside source directory with mysqli_connect.php file.

Main file is located at index.php

## Project structure:

All pages of Web application are in src folder.

All stylesheets are located in css folder.
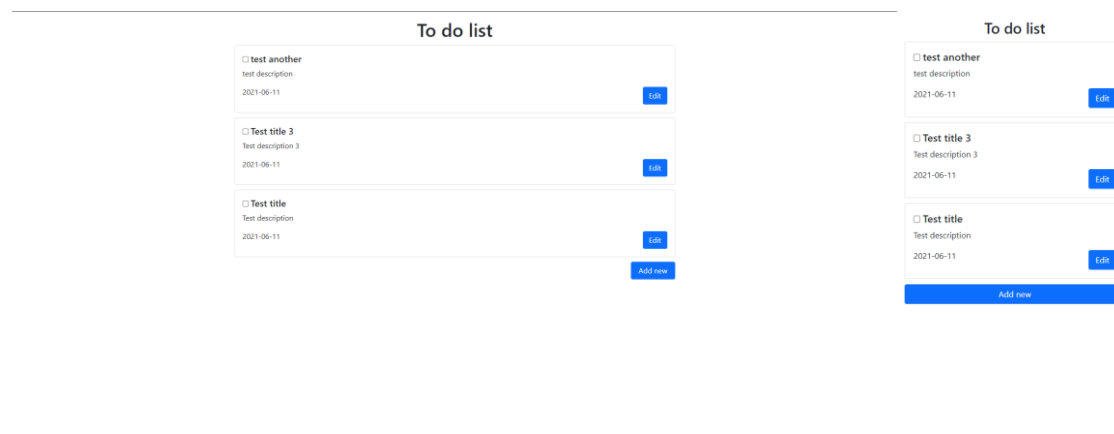

All PHP scripts are located in scripts folder.

Outside all directories is only mysqli_connect.php (for safety of db connection data) and MySQL dump file (dump.sql)

## Work showcase:

There is video attached in this folder showcasing all features and screens – *video.mp4*

There are two images – desktop & mobile version of aplication
